

## ***New Camera Options – Sale Pricing For January 2017!***

---

**A range of new models of iris cameras are now available from Miles Research at Sale Prices!**

These iris camera kits all include a 24-megapixel Nikon DSLR, spare camera battery with charger and additional cords, computer-control camera software, a spare general-purpose zoom lens (18-55mm zoom), an airtight/watertight carry case, and unlimited technical support. All illuminators include a lifetime warranty.

**Add a chinrest for \$500.** These new models include the new *Adjustable-Brightness Focus Light* (a \$150 value).

**New Direct Illumination Iris Camera Kit - \$1600 (MEC-5-FLO)**

**Special package softcase/macro-only – *Save \$200***

**New Central Lighting Iris Camera Kit - \$2100 (MEC-5-SCL) – *Save \$200 – Great Value!***

This camera is also ideal for animal iris photography.

**New Dual Side-Lighting Iris Camera Kit - \$2700 (MEC-5-FSL) – *Save \$200***

In most cases, the FSL (Fixed Side-Lighting) is recommended – it tends to result in less glare with the brown iris and is super easy to use.

**FSL (Fixed Side-Lighting) 2-Channel Side Lighting**  
(MEC-5-D3200-N85-FSL, \$2700)

This photo also shows the new Adjustable Focus Light (\$150 upgrade, included free), which is very convenient for light-sensitive clients and for when you want to control pupil size.

**For Advanced Photography: Combo Illuminators (3-channel, central and dual side lighting)**

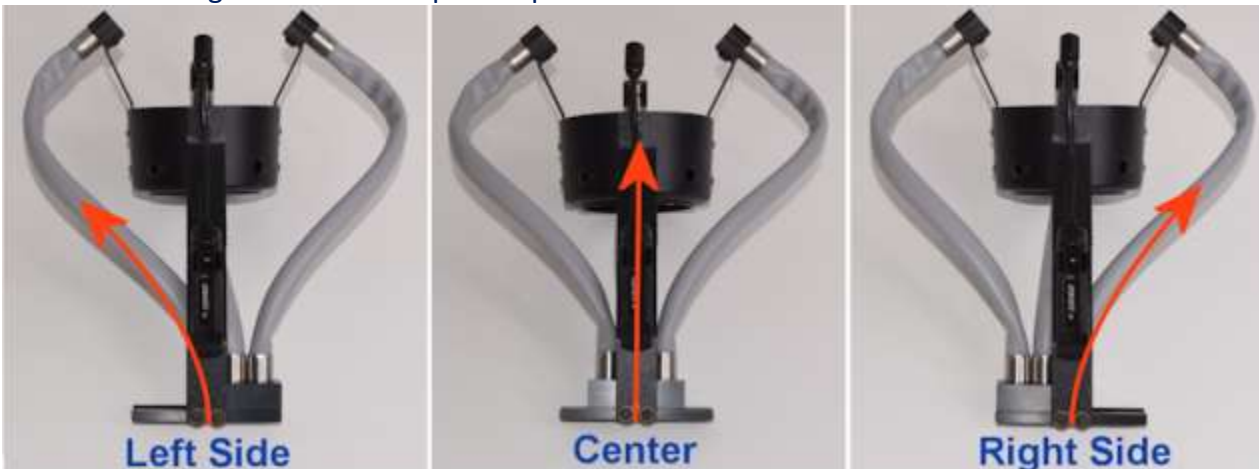

The 3-channel illuminators are the more advanced model – 2 Illuminators in one! These cameras offer central, right, or left side illumination. The 3-channel illuminators come with either Fixed Side-Lighting, or Adjustable Side-Lighting. The fixed side-lighting (CFSL) is simpler (each side light is fixed at the ideal 45-degree angle) - the CASL (Central and Adjustable Side Lighting) is useful for IPB imaging and other special cases where the light angle needs to be adjustable.

### CFSL (Central and Fixed Side-Lighting)

(MEC-CFSL-D3200-N85, \$3200) – *Save \$100*

The 3-channel light shutter is simple to operate:

Here is the 3-channel illuminator that includes both the central lighting and the adjustable side lighting:  
(MEC-CASL-D3200-N85, \$3300)

Custom configurations are also available. Illuminators can be made for most DSLRs.

*Already have a DSLR? Then you can get the Lens-Illuminator Kit (deduct \$550)*

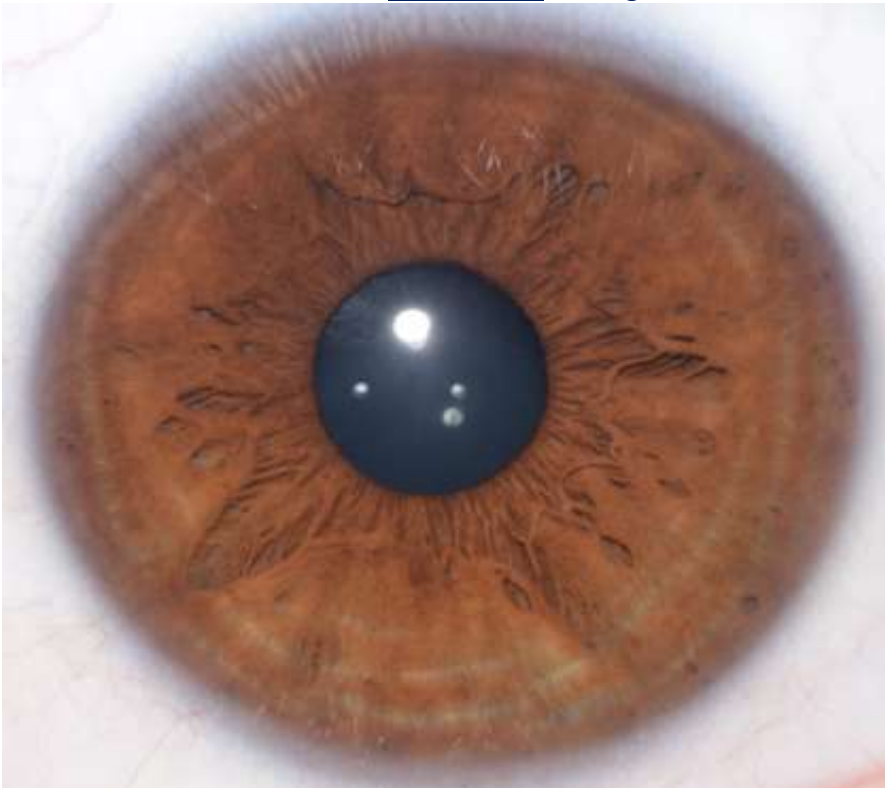

*Already have a DSLR and macro lens? Then you can get the Illuminator-Only Kit (deduct \$1100)*

The Side-Lighting tends to give better images of the dark brown iris:

It also tends to result in less glare on the brown iris.

Here is the same iris with the central light setting:

Here is another iris photo using side-lighting:

The newest chinrest (**CRCS-UF-TTB**) is also available for \$500:

This is the premium professional chinrest:  
(**CRCS-FH4**, \$1100 with camera)

Everything is modular and easy to disassemble.

The tabletop-clamping **CR-TTC-2** is available for \$400:
